

Business Intelligence/Demand Forecasting Specialist ♦ Kindle

Business Intelligence / Demand Forecasting Specialist – Kindle

Job Description:

Join one of the most important teams at Amazon and make a difference. Kindle is Amazon's revolutionary reading device and one of the most innovative, fast pace and growing businesses at Amazon. This person will lead our Kindle demand forecasting efforts and vital to our growing success. As we expand the Kindle business, accurate demand forecasting and inventory planning is critical to serving our customers. We need to have the product customers want, when they want it.

Responsibilities include:

- Data mining and analysis to uncover trends and correlations to better predict demand.
- Using data, develop new statistical predictive models to forecast sku demand, including pricing sensitivity models.
- Maintain, update, and validate models with the latest internal and external information to improve accuracy of forecasting.
- Candidate must have to ability to clearly communicate and explain the demand models (inputs, outputs, rationale, gaps) and recommendations' to senior management.
- Make build recommendations based on forecasted demand scenarios
- Data analysis to validate business and model assumptions

Keys to success in this role include exceptional analytics, statistics, judgment, and communication skills. Need to be able to extract insights from data and be able to clearly communicate appropriate triggers and actions. Candidate requirements include:

- 3+ years of demand forecasting experience. Experience in Consumer Electronics is a plus.
- A Masters degree in statistics, business, or computer science
- Experience building, iterating, and validating predictive data models from scratch
- A proven track record of business intelligence or data mining experience
- Advanced knowledge of Excel
- Experience using SQL, SAS, PERL in the UNIX platform required
