

This position can be remote from Atlanta or Detroit as well as onsite in St Louis.

Global software development firm seeks a SAS Business Analyst for a 6 mo project in St. Louis.

We are looking for an individual who can build SAS Analytical Models to create mock pages in books. This individual needs to know all the program rules in SAS to change the language slightly so it will manipulate the outcome of the book. These changes might make the book shorter, the ads might present differently. Our goal in this project is to create several different mock books and present them to the client so they can see the end result before the books are published.

Must have exp with SAS Enterprise Miner and SAS analytics tool.

This individual must be comfortable presenting and working in front of the client and managers.

Directory Publishing Experience a plus

Take care, Ted
